Works like magic

DISCOVER HIDDEN PROFITS

Machine & operator productivity improvement system for machine shops

1

Unlock 30% more machining capacity

Measure downtimes in real time and eliminate them to increase capacity. Increase profits dramatically.

2

Save CapEx on new machine investments

Postpone capital expenditure on new machines, by making your existing machines produce more.

3

Reduce ROI time on machines

Earn 30% more revenue from machines, increase your return on investment. Reduce ROI time on machines.

4

Shrink machine breakdown time

Don't make broken down machines wait. Respond to breakdown alerts sent on Mobile phones swiftly.

5

Incentivize and retain good operators

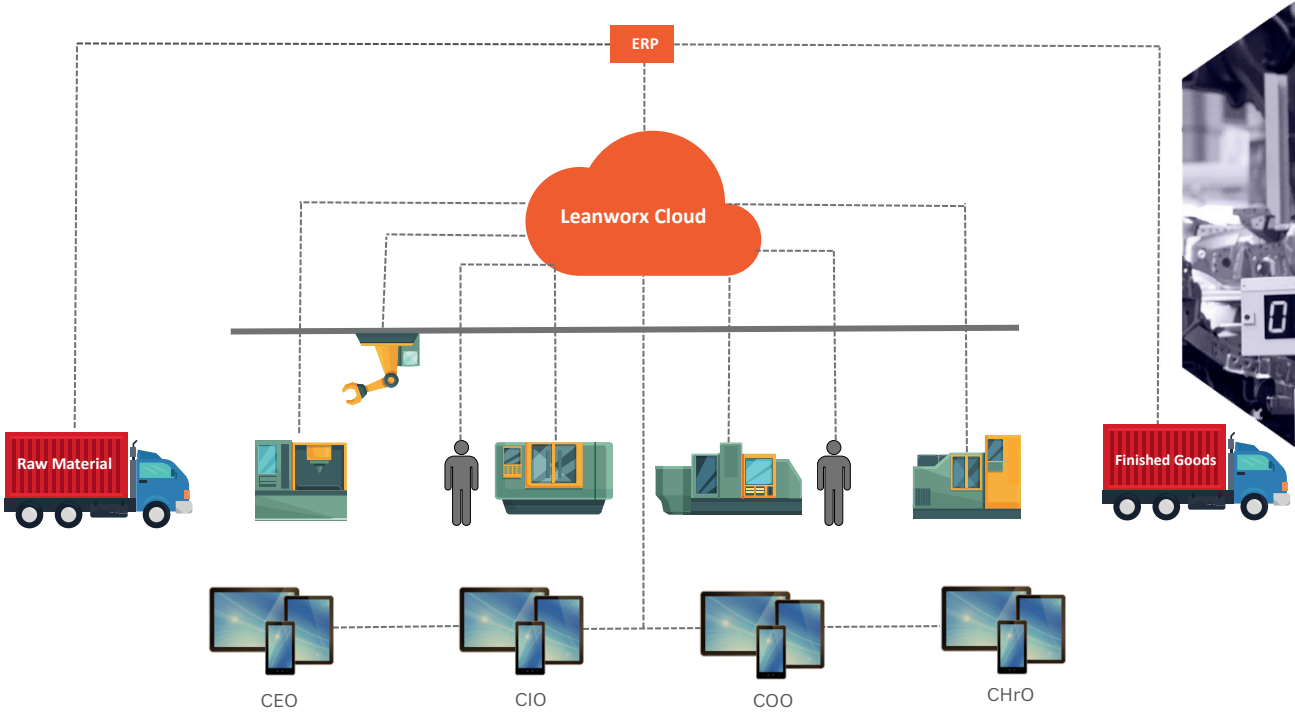
Pay wages and incentives based on actual production and efficiency. Motivate good performing operators.

6

Update shop data on ERP automatically

Push production data seamlessly into your ERP system. Eliminate data errors, delays and data entry costs.

Needs no Internet | Maintenance Free | IT Free | Plug & Play | Track Any Machine



Seamless interface to ERP

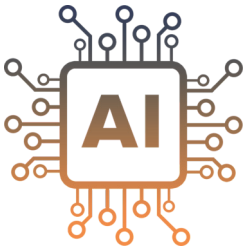
LEANworx offers two-way data exchange with any ERP or production scheduling software. Easy to use APIs are available for rapid data integration with SAP or any other ERP system.

Maintenance ticketing system

Breakdown ticketing system streamlines machine maintenance activity. Operator does not have to leave his machine to report machine breakdowns. Create service ticket in one touch.

Alerts, Dashboards & ANDON display

Get an overview of what is happening in your machine shop on real-time dashboards and Andon boards on large screen TV or PC at corporate office, without having to call someone for data or travel to plants located in different cities.



Preventive maintenance

Systematic preventive maintenance can be planned to ensure PM tasks are carried on time on all machines. Alerts, reports and dashboards help you identify non-compliance of PM schedules to take timely corrective action.

Reports that prompt you to act

Variety of click & show reports inform you of Production, Productivity, Maintenance, Quality, metrics and trends. Reports are configurable by the user. Reports can be in XLS, PDF or XML format and can be automatically emailed to specified people at pre-set times.

Artificial Intelligence driven

Self-learning functions in the software drives automatic configuration and logical data interlocks. Several in built Artificial Intelligence driven algorithms drastically reduce human intervention, hugely increase ease of use and reduce implementation time.
